DIGIVOTE® III

Software basic interactive - PowerPoint Add-In
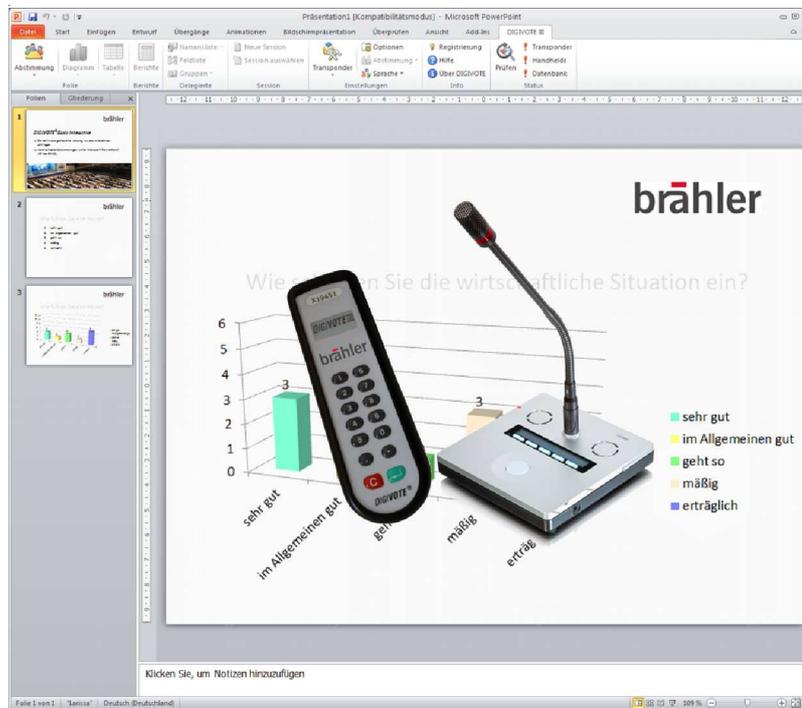

Description

DIGIVOTE basic interactive is an Add-In for Microsoft® PowerPoint, that provides interactive audience response straight from your PowerPoint presentation with the help of voting units.

By means of an easy to use DIGIVOTE Wizard you are able to create question and result slides within your PowerPoint presentation. Once the slides have been created you can use all PowerPoint formatting and animation features to enhance your presentation. When showing the slide show, the DIGIVOTE® question slide will pop-up a voting toolbar to start your voting. DIGIVOTE will collect the interactive inputs from your audience using the voting units and display the results.

DIGIVOTE basic interactive can be used both with DIGIVOTE VD30 voting units as well as delegate units DIGIMIC CMic CSV. Both systems can also be used together. The transponder TR30 respectively the central unit DCen (DCen mini) processes all VD30 voting units or CMic CSV. When using VD30 more than 10,000 voting units can be operated on a single radio channel.

Features

- different modes of interaction
  - Standard vote
  - Attendance check
