

DIGIMIC® Software

DCenWeaver – Software for configuring central control units

Article no.: S4.1360

Description

DCenWeaver is a flexible control software newly developed for the BRÄHLER DIGIMIC microphone and conference system. Within a few seconds, the free software DCenWeaver synchronises all DCens and treats them as a single overall system.

Use the DCenWeaver software to comfortably manage wired and wireless delegate units within one system. DCenWeaver automatically detects all DCens in the system and combines them into one large overall system with a click. The detected DCens can be individually connected using a button to fit your particular needs.

When the program is restarted a search will be run for the already selected DCens and they will be connected automatically. This speeds up restarting.

Events can be prepared in a targeted way by importing Excel files (including names, status, etc.).

Features

- different microphone operating modes
 - 4 automatic modes
 - 4 voice activation (VOX)
 - manual mode
 - chairman priority
 - VIP function
 - request to speak
- delegate name handling
- adjustable number of microphones active at the same time
- easy access to all functions via mouse, keyboard and/or touch screen
- connect more than 1,000 delegate units to one overall system

System requirements
